PickX

A DAILY WAGE WORKERS HIRING SYSTEM

BASIM SHEBIN K P

DESCRIPTION

PickX is a simple digital platform designed to connect daily wage workers with people who need short-term services. It helps users find, hire, and manage workers quickly and transparently. By reducing delays and middlemen, PickX makes the hiring process easier, faster, and more reliable for both workers and employers.

PROBLEM STATEMENT

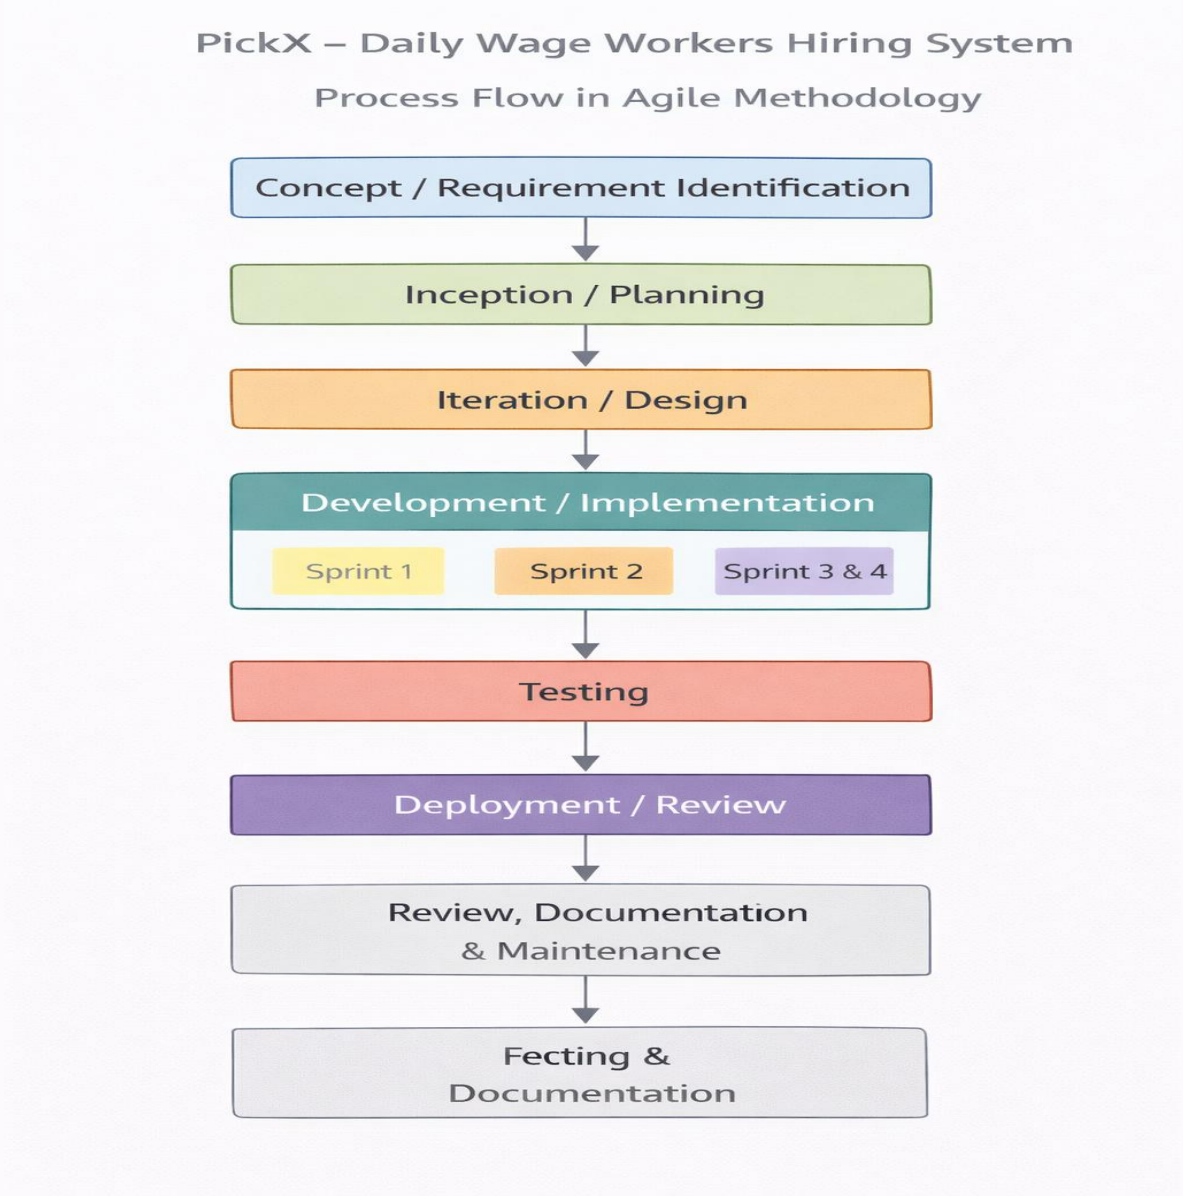
In many regions, especially in urban and semi-urban areas, hiring daily wage workers such as plumbers, electricians, carpenters and helpers in an unorganized and inefficient process. Customers usually depend on: Word of mouth references, local agents or roadside hiring These methods lead to several challenges:

- Difficulty in finding available and reliable workers on time.
- Lack of price transparency often resulting in disputes.
- No formal way to verify worker's skills or trustworthiness.
- Workers face irregular job opportunities and income instability.
- Absence of a centralized system to manage job requests, bookings, and feedback.

SOLUTIONS

- Centralized digital hiring system
- transparent price tagging
- verified worker profile with skills
- intelligent recommendation system
- job booking and status tracking
- rating and feedback mechanism
- digital payment support

PROCESS FLOW



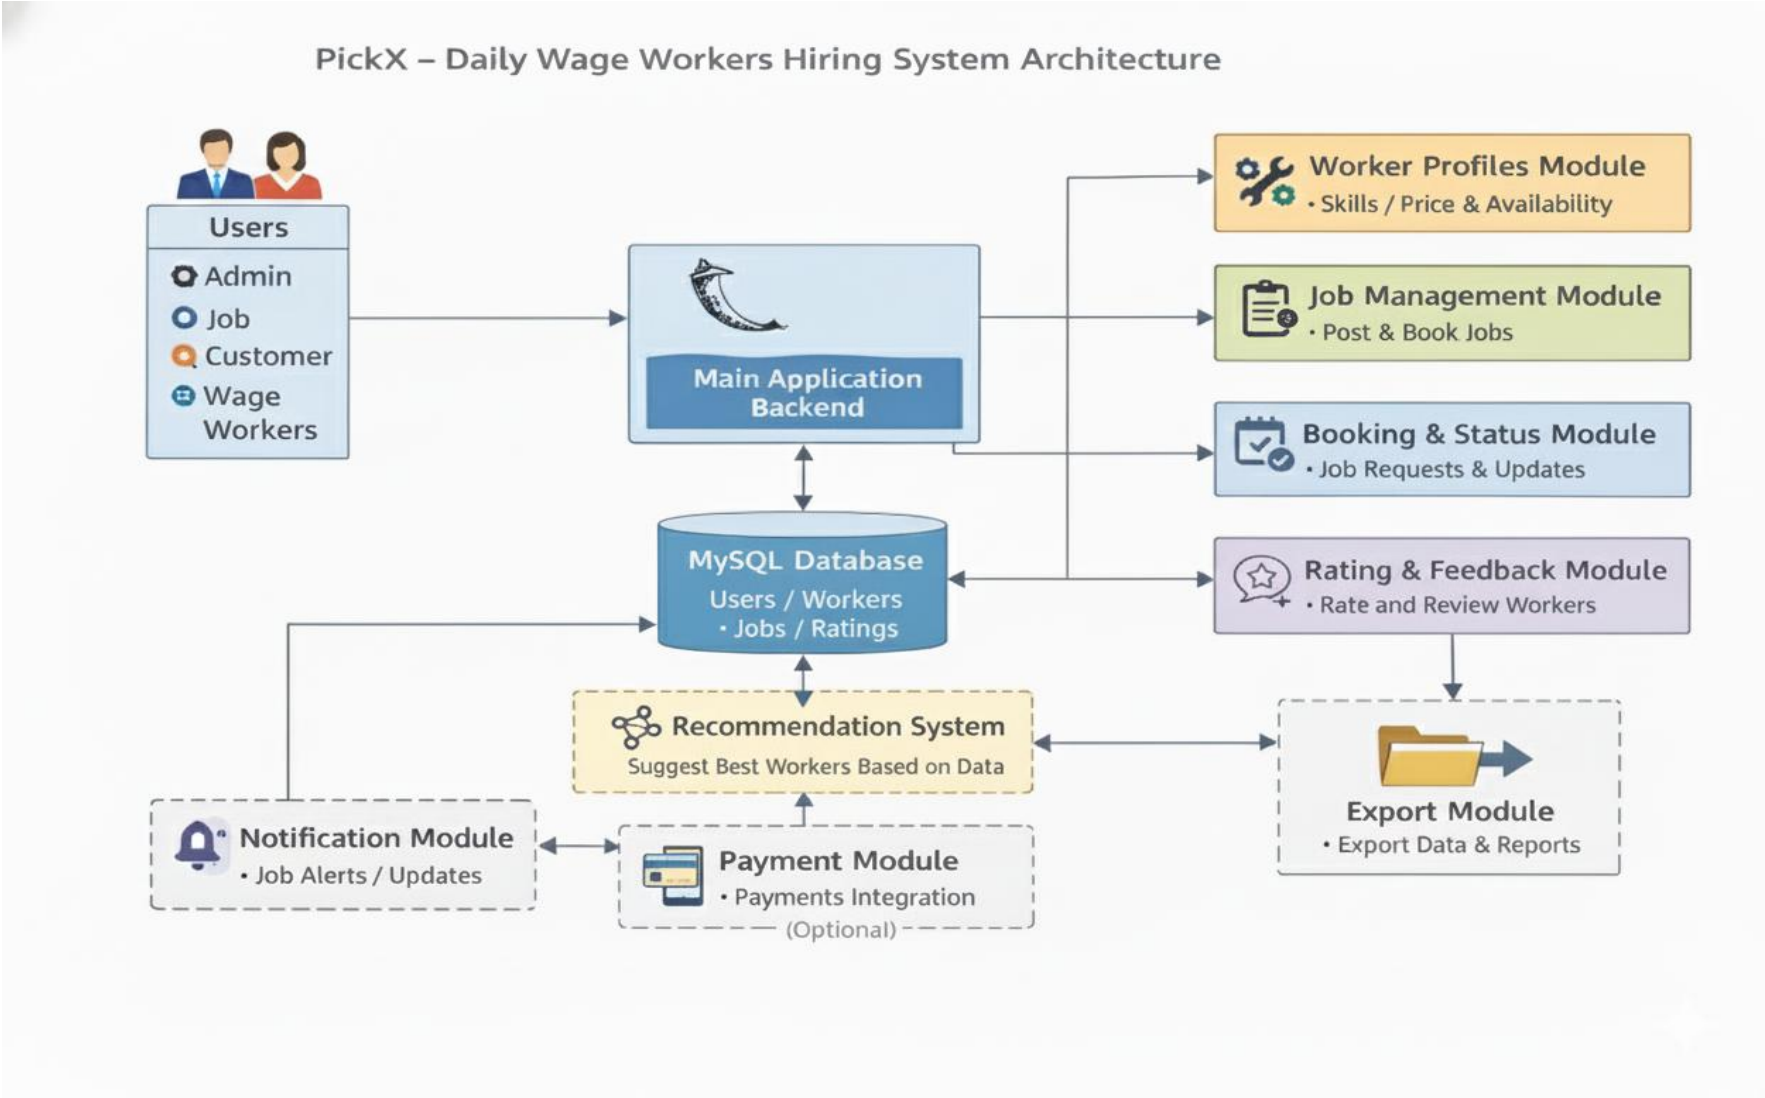
TIMELINE

PickX Project Timeline Based on 7 Steps of Agile Methodology

Agile Step	Week	Activity
Concept	1	• Problem identification • Define project objectives & scope • Initial proposal
Planning	2	• Backlog & sprint planning • Project timeline creation
Design	3	• Architecture & diagrams • Database setup planning
Development	4 – 7	• Sprint-based coding • Module-wide development
Testing	8	• Verification • Bug fixing
Deployment	9	• Review & modification • Collect feedback
Maintenance	10	• Documentation & reports • Final submission

ARCHITECTURE

PickX ARCHITECTURE



USER MODULE

- This is the entry point of the system.
- User Types:

Admin

manages users, categories, and system data

Job Providers

post jobs and book workers

Workers

create profiles and accept jobs

CONTROL MODULE

This is the core of the PickX system.

Responsibilities:

- Receives requests from users
- Applies business logic
- Controls data flow between modules
- Communicates with the database

WORKER PROFILE MODULE

This module manages worker-related information.

Functions:

- Store worker skills (plumber, electrician, etc.)
- Set price (hourly / daily)
- Manage availability
- Update worker profile

JOB MANAGEMENT MODULE

This module handles job-related operations.

Functions:

- Job posting by customers
- Job listing and search
- Assigning jobs to workers

BOOKING & STATUS MODULE

This module tracks the life cycle of a job.

Functions:

- Send job requests to workers
- Accept / reject jobs
- Update job status

RATING & FEEDBACK MODULE

This module improves trust and service quality.

Functions:

- Customers rate workers after job completion
- Store reviews and ratings
- Display worker reputation

DATABASE MODULE

This is the central data storage unit.

Stores:

- User details
- Worker profiles
- Job details
- Booking history
- Ratings & feedback

RECOMMENDATION SYSTEM ENGINE

The Recommendation System in PickX is a backend-level intelligent module designed to suggest the most suitable daily wage workers to customers based on multiple relevant factors.

It improves user experience, fairness, and hiring efficiency.

Purpose:

- Reduce time taken to find suitable workers
- Improve job matching accuracy
- Ensure fair visibility to skilled workers
- Provide personalized suggestions to customers

NOTIFICATION MODULE

This module provides real-time alerts.

Examples:

- New job request
- Job acceptance
- Job completion updates

PAYMENT MODULE

This module handles digital payments.

Functions:

- Payment processing
- Transaction recording

EXPORT MODULE

The Export Module allows the system to generate and export important data in a structured format for administrative, analytical, and documentation purposes.

Purpose

- Provide system reports for admin
- Enable data analysis
- Support auditing and record keeping
- Help in future system scaling

THANK YOU
